SUMMARY

Driven Backend Developer with 1 year of experience in constructing scalable multi-tenant REST APIs using Golang and Java Spring Boot. Developed and enhanced backend services, leading to improved performance and scalability for client applications. Seeking opportunities to further leverage skills in Java and C# to drive innovative solutions and contribute effectively to future projects through strong communication and problem-solving abilities.

EXPERIENCE

Backend Developer – Contractor

Raastar

October 2025 – December 2025

- Developed **multi-tenant REST APIs** using **Golang** and **Java Spring Boot**, supporting scalable applications for international clients.
- Designed and maintained backend services focused on **scalability, performance, and maintainability** across multiple client projects.
- Developed backend applications and services using **C#/NET**, adapting solutions to client-specific requirements.
- Collaborated with cross-functional development teams to deliver and maintain **production-oriented backend solutions** for international clients.

Backend Developer – Internship

Bashomal

March 2025 – August 2025

- Reviewed and analyzed **legacy backend code**, identifying modernization opportunities across existing system components.
- Maintained and upgraded backend services using **Java and Spring Boot**, applying modern development practices to improve scalability and reliability.
- Designed and integrated **PostgreSQL** persistence for backend services, supporting data management and application workflows.
- Improved backend **system stability, scalability, and reliability** through code maintenance, modernization, and architectural improvements.
- Engaged in Agile sprints alongside backend engineers to deliver, maintain, and refine Java Spring Boot services, actively participating in implementation, ongoing maintenance, and thorough code reviews.

PROJECT

URL Shortener

github.com/MahdiNoorzadeh/url-shortener • August 2026 – August 2026

- Built a production-style REST API for creating short URLs with optional expiration, HTTP 302 redirects, click tracking, and statistics endpoints.
- Implemented a **Redis Cache-Aside strategy with TTL synchronized to URL expiration**, reducing database dependency and enabling low-latency **HTTP 302 redirects** backed by PostgreSQL.
- Integrated **8+ production-oriented backend capabilities**, including Flyway database migrations, request validation, global exception handling, OpenAPI/Swagger documentation, health checks, Docker, Docker Compose, and **CI with GitHub Actions**.
- Developed **unit and integration test suites** using JUnit, Mockito, and Testcontainers, covering core URL creation, caching, expiration, validation, and PostgreSQL/Redis integration workflows.

CipherVault

github.com/MahdiNoorzadeh/CipherVault • November 2025 – November 2025

- Developed a desktop application for securely storing and managing API tokens across multiple projects and environments (Production/Development).
- Implemented AES-256-GCM encryption for token values and stored the master key in the OS keyring (Keytar) so secrets never persist in plaintext.
- Built full CRUD operations, environment separation, one-click copy, visibility toggle, and a modern UI with dark/light themes using Vue 3 + Vuetify.

EDUCATION

Associate in Software Engineering

Vocational Institute of Imam Khomeini Aliabad • 2025

SKILLS

Programming Languages: Java, C#, JavaScript

Frameworks: SpringBoot, Dotnet, Node.js

Databases: PostgreSQL, MongoDB

Additional tools: Docker, Redis, Postman, Podman, Linux

Soft Skills: Flexibility, Emotional Intelligence, Communication, Problem Solving
